

AI-BUILDER: New LLM Features

Martin Welss, Fraunhofer

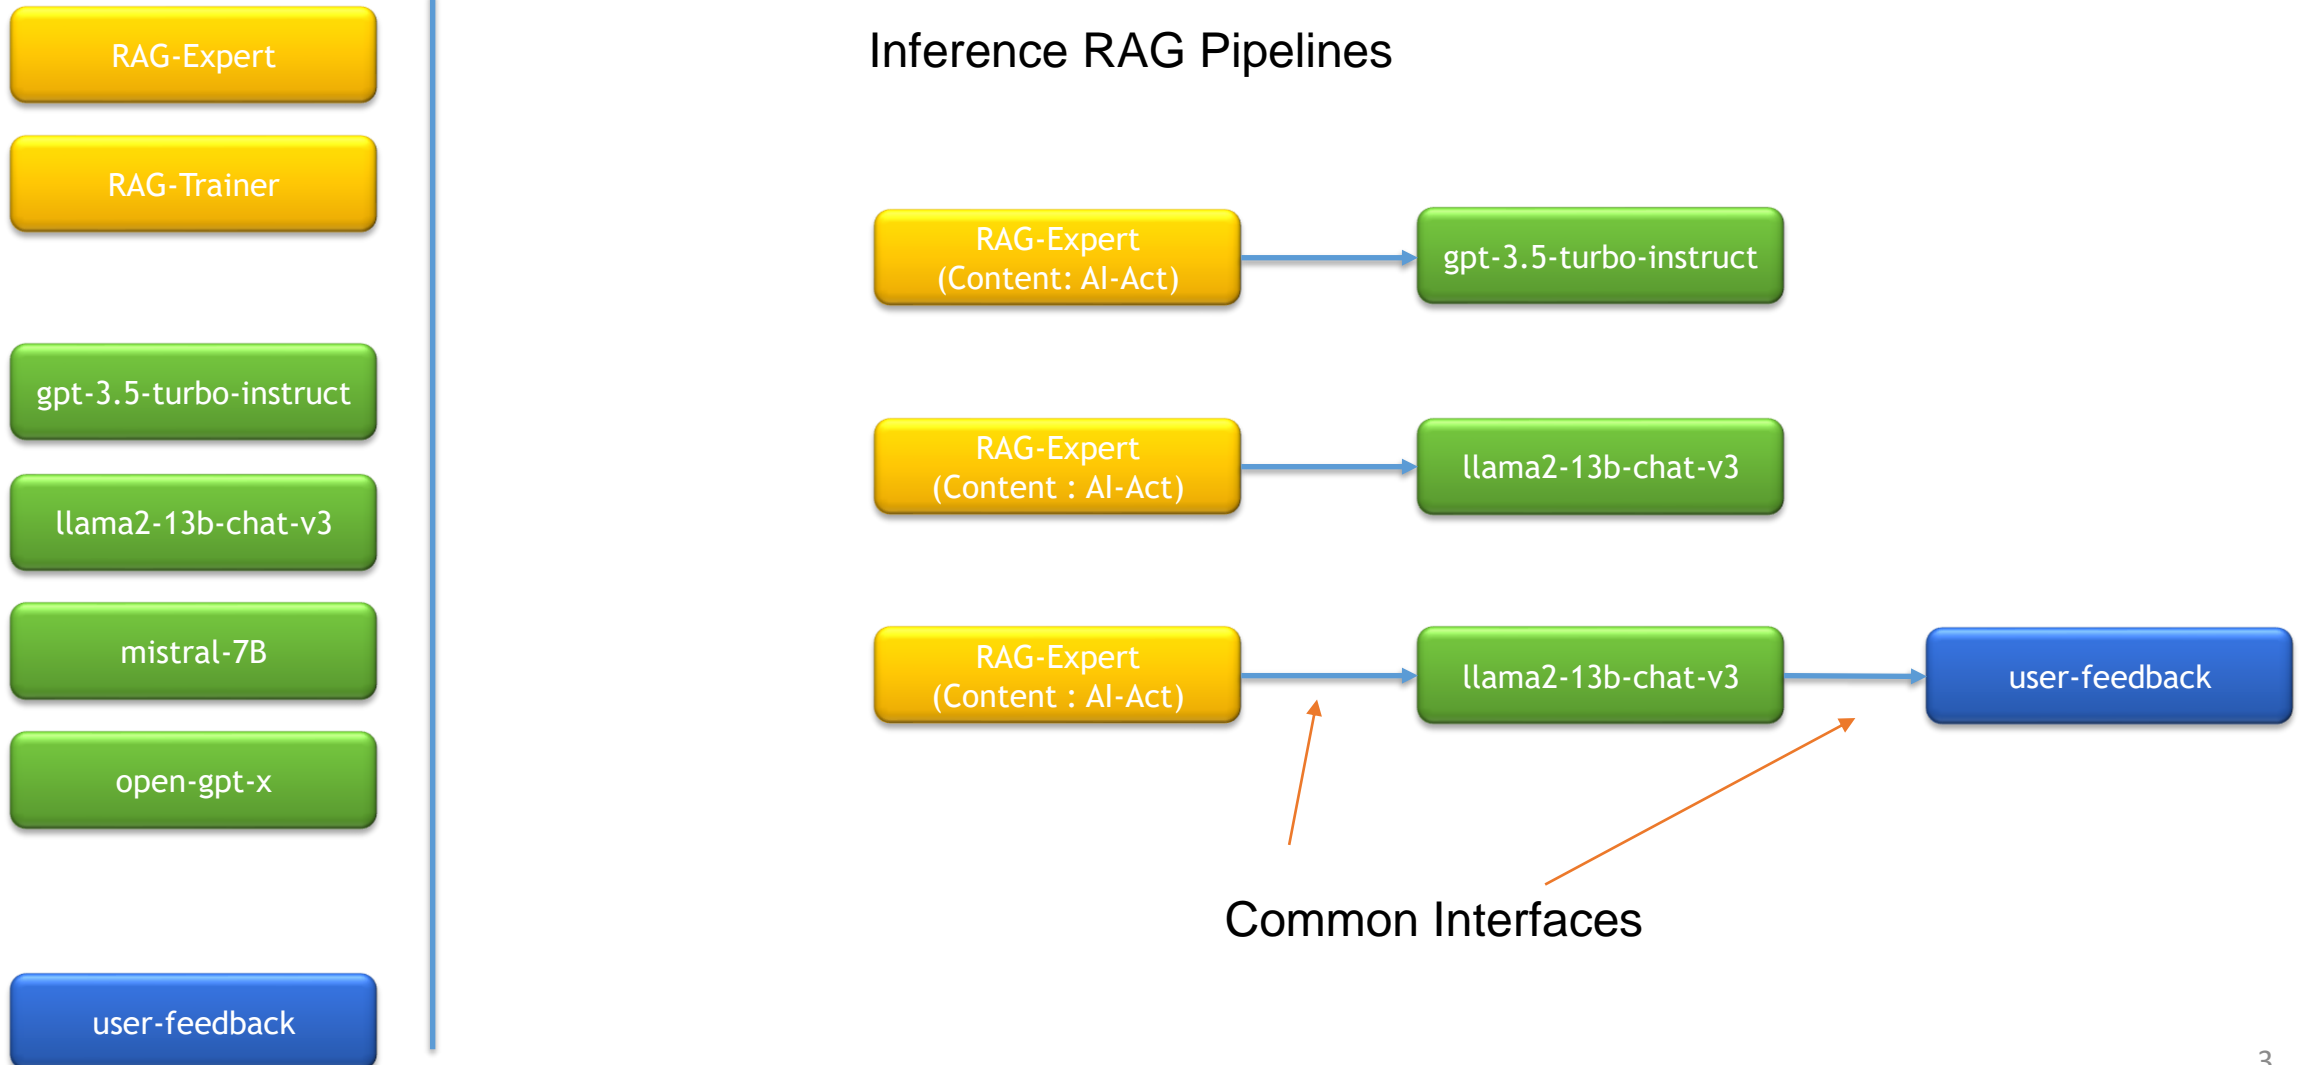

Support for API-Keys

- For commercial LLMs, you need an API-Key
- Needs to be accessible during execution
- The AI-Builder Playground now supports API-Keys in environment variables per docker image
- Advantages:
 - No need to let the user type in API-keys
 - No need to have the keys (hardcoded) inside the docker image
 - Easy to change API-Keys
